RANDONNÈE 30 WS **4** 

# RANDONNÈE 30 WS

Congratulations on your purchase of a SALEWA Pack. We want to besure that you understand and utilize your new SALEWA pack in the best way. Following you will find a description of all functions the Pack is offering.

# FEATURES

.

**INNER POCKET FOR VALUES** 

COMPARTMENT FOR

SHOVEL AND PROBE

# MULTIFUNCTIONAL STORAGE SYSTEM

Immediate access to safety equipment, gear and accessories, thanks to the wide opening and to the functional compartments, engineered to keep everything ordered and at hand.

### 4 ICE AXE FASTENING, WITH PROTECTION POCKET

Insert the axe pick into the dedicated pocket, fix the head in place with the bungee cord and tighten it using the cord stopper, if present. Fasten the shaft to the bungee loop using the dedicated buckle.

#### 5 HIP BELT POCKET

Valuables such as money, camera and mobile are well taken care of here.

# 6 SKIN POCKET

Side pocket to store the skins, engineered to keep the gear in the main compartment from getting wet.

# FEATURES

# ROPE FASTENER

The rope compression strap is located next to the pack opening. To secure your rope, wrap the straps around it, hook it into the sewn-in loops next to the opening and lash it down tight.

SIDE ZIPPER ACCESS

For quick and easy access into the main compartment without having to open the top.

#### **GOGGLE POCKET**

Top side fleeced lined pocket, to store ski goggles, without getting scratched.

# 10 SIDE COMPRESSION STRAP

These straps allow you to cinch in your pack for a more stable carry. They also serve as attachment options for external gear.

# 11 STERNUM STRAP

Slide the strap in the middle of your sternum to stabilize the pack to your body. The elastic strap promotes effective breathing and a snug fit.

# 12 ALUMINIUM CLOSE BUCKLES

# FEATURES

robic

# 13 PARALLEL SKI ATTACHMENT

Insert one ski in the lower loop on the side of the pack or, if not present, on the lower side compression strap. Wrap the upper side compression strap around the ski and pull it tight. Do the same with the other ski, on the other side of the pack.

ROBIC® FABRIC Excellent tenacity and up to 60% resistance to tears compared a

standard nylon

6 SNOWBOARD FIXATION

# FEATURES

# HYDRATION SYSTEM EXIT

Place the hydration system in the pouch on the back of your pack. Fasten the hydration system either with the sewn in hangers or velcro. Thread the hose through the hydration exit and secure it underneath the routers on the shoulder straps.

# SALEWA

# **1. MAIN BENEFITS**

# 2. CARRYING SYSTEMS

We seek to design the best-possible solutions for mountain enthusiasts based on our philosophy of creating strong & light products. We understand our users' needs and provides the right features and benefits for them to enjoy their adventures:

### STRENGTH & DURABILITY

# VENTILATION

Our design team carefully analyses the exact functions of each part of a backpack to define performance requirements, select an optimum combination of materials and engineer the strongest gear for the longest use. Sweating cools down the body via evaporation. Conventional backpacks stop this happening as their back panels prevent the ventilation sweat requires to evaporate. The wet back panels mean you get chilled. All SALEWA backpack back panels are designed to ensure good ventilation. SALEWA has three different carrying systems. Depending on size and area of use, its backpacks are equipped with an DRY BACK AIR, DRY BACK CONTACT or DRY BACK CUSTOM. Our DRY BACK AIR system maximizes ventilation and minimizes the backpack surface in contact with the body; the DRY BACK CONTACT system keeps the load barycentre of the backpack close to the body for maximum control on ascents and provides good ventilation through its air channels. DRY BACK CUSTOM is highly air permeable, lightweight and with a quick and easy height-adjustable back panel system for a customized fit.

#### LIGHTWEIGHT DESIGN

Our sophisticated design solutions use the best materials to minimize weight. Lightweight fabrics, buckles, straps and accessories also help keep weight down.

# **3. ADJUSTING YOUR BACKPACK**

#### HOW TO GET THE BEST FIT:

- Loosen all straps (shoulder straps, load control straps, waist belt, compression straps) before you load the pack.
- If your backpack has a back regulation system, follow the instructions in the table to identify your torso length and set the correct back length.
- 3. Pull in the waist belt so that it sits just above the pelvis. Make sure that your iliac crest is centred between the waist belt padding. Close the buckles. Secure the loose ends of the straps.
- Tighten (but don't overtighten) the shoulder straps until the carrying system meets the back.

The attachment point of the shoulder straps should be about one inch below the seventh vertebra (C7). If necessary, readjust the back length.

- 5. If your pack has them, tighten the load control straps at the top of the shoulder straps.
- 6. Close and adjust the length of the chest (sternum) strap, and make sure it sits at the right height (at your sternum). A snug fit will help stabilise the pack. Take care not to create pressure points.
- Check the load control straps again and ensure that your shoulder straps fit snugly around your shoulders.

We recommend that you never pack more than 70% of your pack's volume. The extra room will come in useful if you have to unpack the contents and quickly pack them again.

4. PACKING YOUR BACKPACK

- Space is limited, so it makes sense to pack systematically. This also makes your pack easier to carry. We recommend packing as follows: store lighter items, such as your sleeping bag and reserve clothes at the bottom; keep heavy items such as your cooking equipment or tent in the area of your upper back.
- Store valuable item such as documents, money, keys etc. in the dedicated pocket.
- Pack items you want close to hand at the top or in outside pockets: extra clothing, water bottle, maps, compass, snacks, etc.

#### **5. CARE AND MAINTENANCE**

Backpacks do not need much care and maintenance. Stains can be cleaned off with water. Lubricate the zippers occasionally with silicone or oil. Although, if you use your pack in dusty areas, don't use silicone or oil as they attract dust. If your zippers stick, clean them with an old toothbrush.

- Fasten longer items, such as tent poles or trekking poles, to the side of the pack using the compression straps – and store the loose ends away in the side pockets. If required, large and bulky items (sleeping mat, tent, etc.) can be attached on the outside using compression straps.
- Store your cooking equipment, food, spare clothing and other items in the main compartment. Keep your most frequently used gear close to the top. Less frequently used kit (e.g. bivouac sack) can stay at the bottom.
- The separate bottom compartment is meant for your lighter items, such as your sleeping bag or spare base layers.
